Summery

Enthusiastic Django back-end developer with 1 year of hands-on experience in Django and Python. Skilled in building and optimizing scalable web applications, and proficient in RESTful APIs and database management with PostgreSQL and MySQL. I enjoy solving hard problems and I am greedy when it comes to learning, gaining experience, and growth.

I'm currently looking for Internship or Junior positions.

Projects

- **Shop Center (E-Shop)**

  This project is an online shop developed using Django. I used user authentication, class based views, template management (HTML, CSS, Bootstrap, JavaScript, Ajax) and worked with some Django packages.
  - I am still developing this project in my free time and it is not finished yet.
  - Github Link

- **Travelista (Blog)**

  This project was a project to develop my basic Django Models knowledge and is some kind of blog website.
  - I am still developing this project in my free time but I deployed it on my personal domain as well.
  - Github Link
  - Production Link

- **Novarian (GiftShop)**

  This project is about to be a gift shop website. Authentication and user management, product and payment management, security and integration with Next.js are implemented in this project. It is also developed on Docker.
  - This will be my personal website and I will make the GitHub repository private once it got close to production.
  - Github Link

- **Plus You (Coffee Shop Menu)**

  Not so complected or difficult project. Just a basic coffee shop menu but it was my first step on Django and React integration. (although)
  - The website is no longer up on the Internet due to business change of the owner but codes are still available in my GitHub. I also developed a template while I was developing this project for future usage.
  - Github Link
  - Django and React Template

Skills

★★★★★★★★☆ Python

I worked with python for so long and I am familiar with common libraries as well. I am able to develop my knowledge using new libraries through documentation and searching if necessary.

★★★★★★★☆☆ Django Framework

I started learning Django in 1401 and gained knowledge about MVT Structure, Models, FBVs, CBVs, Working with Static Files (HTML, CSS, JS, Images, etc.), User Authentication, Rest Framework, Popular Django Modules, Contributes with React.JS, Debugging, Deployment, CI/CD and some other stuff.

★★★★★★★☆☆ Django Rest Framework

Serializers, Mixins, Generic Views, Nested Serializers, Token Authentication, JWT, Swagger, Caching, Redis, Thtottel, ...

★★★★★★★☆☆☆ MySQL

★★★★★★★☆☆☆ PostgreSQL

I now SQL and worked with MySQL in cpanel production and PostgreSQL in Local environment and inside Docker Containers,

★★★★★☆☆☆☆ Docker

I have gained knowledge about docker in projects. I can write Docker file suitable for Django projects, work with Docker Compose and integrate with Database, Front-end, Redis, and Nginx.

★★★★★☆☆☆☆ HTML, CSS, Bootstrap

I am not a front-end developer but I learned HTML5 and CSS3 to work on my practical projects. Bootstrap has the same story. Nothing that can not be done with small searches.

★★★★★★★☆☆ Git and GitHub

All my projects are developed and maintained using git and GitHub. I also have experience using GitHub actions to deploy Django project (CI/CD)

Educations

Shahrekord University
Bachelor's Degree: Computer Science
2021 Sept – 2025 Sept

Certifications

All my Certifications are from [Maktabkhooneh](#) and You can browse my certifications on my personal website linked [here](#).

But I find it useful to mention the titles:
- Python Basic, Advanced, and OOP
- Django
- Basic Front-end
- Git

I have completed the following courses but I have no authentic and formal certifications to submit them:
- Advanced Django
- Django Rest Framework
- Django E-Commerce
- SQL Server
- Docker
- Linux
